

METHOD AND APPARATUS FOR AUTOMATICALLY REORGANIZING  
TEMPLATES IN A WEB-BASED FILE RETRIEVAL SYSTEM

ABSTRACT OF THE DISCLOSURE

[0051] For use in designing a gas turbine engine, a database having a plurality of sections, each section storing one or more templates, a method of reorganizing a select template from one section to a different section within the plurality of sections includes reviewing an index file corresponding to the select template to identify a section among the plurality of sections where the select template is organized. The method further includes editing a storage location of the index file to identify a different section among the plurality of sections to reorganize the select template to the different section without moving underlying files of the select template between the plurality of sections to design the gas turbine engine.
